AN ADVENTURE

YOU WILL NEVER FORGET

SALT LODE

THE SALT TIME JOURNEY

Salt is one of life's building blocks. Millions of years ago oceans covered the present-day countryside. Thousands of years ago man learned to mine salt. The Berchtesgaden Salt Mine is one of Europe's special features, an international attraction embedded in a fantastic landscape. In the 21st century, the SALT TIME JOURNEY leads into the depths of the mountain, into the earth's gift — into mankind's treasure vault!

Into the Berchtesgaden Salt Mine.
 Into the newly designed Adventure Salt Mine —
 a place where salt is still mined today.
 A SALT TIME JOURNEY from the past into the future.

The historic Bavarian town of Berchtesgaden — close to the border to Salzburg, an hour from Munich and Innsbruck, three hours from Vienna — has been a centre of salt mining & brine extraction for centuries, and now offers a unique attraction. Knowledge and fascination amalgamate into an experience for everyone at the salt mine: Two hours of adventure for young and old. The ideal excursion destination, just the right complement for any holiday: A place to gape in awe, enjoy, and to visit again — SALT TIME JOURNEY.

The route leads through the welcome portal to the visitors' centre. This is where the multilingual experience of all information about salt starts: Its origin, importance, chemistry and geology, and the essentiality for nature and creation. Over the course of millennia, new technical discoveries and developments were applied in salt mining. At the same time, salt became mankind's memory storehouse due to its preservative effect.

THE VISITOR BECOMES AN EXPLORER

After getting dressed, visitors enter the mysterious world and become the explorers of salt and mountain. The journey with the visitors' train leads into the depths of the mountain — a spectacular combination of rock and salt, nature and technology. At the sink works' train stop, a glittering and sparkling site of yearning emerges through light and colour, salt and humidity: A place which is open to visitors via a miner's slide! Lines and space merge into a unique experience in this Salt Cathedral.

THE ROUTE THROUGH SALT

The visitor's route leads through age-old tunnels to the origins of historic salt mining. Mining relicts alternate with surprising effects, and SALZI the mascot welcomes the children.

The ferry crosses the Mirror Lake under a twinkling, light-sparkling vault — a sensory experience deep under the earth's surface.

Mighty salt lodes are visible in the rock. The ventilation doors signal the mining that is still active today.

The route gradually leads back to the light of day. A journey draws to a close. A journey through the history of the earth and fantasy, through beguiling sensory impressions and fascinating information — a journey through salt and time: A journey into the history of mankind!
